# Skin Tightening and Lifting - it's time for results!

## Frustrated by loose and crepey skin

It's bound to happen to everyone. Sometimes after weight loss, through illness, family history or with age, the skin becomes loose, creating folds and creases that only get worse with time. A revolutionary new way of eliminating some of the effects that time can have on your skin's appearance, tone and laxity is now available. Experience the power of Soprano XL Laser Skin Tightening!

## What is skin tightening?

The Soprano XL Near-Infrared laser Skin Tightening is an effective, safe and non-surgical procedure for improving skin laxity anywhere on the face or body. Deep thermal heating stimulates dermal contraction and collagen rebuilding leading to firmer, younger looking skin. This anti ageing treatment helps to restore, tone and tighten the skin with no down time, minimal discomfort and at a fraction of the cost of cosmetic surgery.

## Benefits of Soprano XL

Face and Body including arms, legs, abdomen, back, buttocks, chest and decollete areas.

Fast and effective results that are long lasting non-invasive with no down time and no pain.

For Men & Women of ALL skin types.

## How does it work?

The Soprano XL Near-Infrared Laser Skin Tightening delivers a continuous rapid pulsing beam of high intensity Near-Infrared light sweeping gently over the skin, deeply penetrating the skin tissue. The light heats up the water content of your skin which stimulates the repair process and production of collagen and causes the skin to contract and tighten. Your body's own natural healing process will also start to produce new collagen over the following months to further tighten, firm and smooth the overall appearance of your skin improving with time, the effects are long lasting. The procedure will be explained to you by a qualified therapist who will answer any questions you may have.

## Firm & Glow

The treatment boosts natural skin hydration at a level in the dermis where it is needed. When the skin loses its dry crepey look, the tone, colour and smoothness improves. Skin tone and texture give away your age just as much as the lines on your face.

## How long does it take?

The procedure usually takes between 15 minutes to an hour depending on the size of the area to be treated.

## How many will I need?

The number of treatments needed will depend on the area and the condition of the skin. A series of six treatments at 4 – 6 week intervals may be required to achieve the desired result of smoother, tighter skin on your face, neck, arms, abdomen and other areas.

## When will I see the results?

You will notice an immediate improvement following treatments, however you will see further improvements develop gradually over a period of 1 - 4 months as new collagen is formed and your skin further feels tighter and smoother.

## How long do the results last?

Improvement can last for several years after treatment. Top up treatments are recommended annually.

## Will it hurt?

Treatment is generally enjoyed as a comfortable massage and considered by most people to be 'near' painless, with only a warm sensation or feeling of heat during the treatment. During the procedure the cooling device within the treatment hand piece protects the skin from excess heat.

You may experience lingering warmth, tightness, swelling or redness in the treated area, which often fades within a few hours.
